

Problem with LCMT

Posted by agfe - 2008/07/08 08:40

I am facing problem in generating random Land cover fractal grid using LCMT in AGWA2. Firstly in the polygon definition tab, the polygon drawing tool is disabled. Secondly when I am trying with a predefined polygon the program stopd after running for a few minutes and shows an error message as below

FormLCMT.btn Process_click()lcmt failure

Kindly guide me to solve the problem.

What kind of feature class are you selected your polygon from? I just discovered a bug in the tool where only shapefiles can be used for polygon definition.

The polygon drawing tool should remain disabled until you type a name into the textbox, but it will fail unless you have the Input Land Cover and Output Land Cover tabs populated.

A updated version of AGWA 2.0 is due out shortly, so I'll take a closer look and try to weed out some of these bugs in the Land Cover Modification Tool before the release.
